

## Ans Display Array

```

Sample Input
5
3
1
0
7
5

Sample Output
3
1
0
7
5
    
```

① Expectation: `displayArr (int[] arr, int idx)`

`displayArr (arr, 0)`

{ 3, 1, 0, 7, 5 }

② Faith:

`displayArr (arr, 1)`

{ 1, 0, 7, 5 }

③ Meeting Expectation with faith

`syso (arr[idx]);`

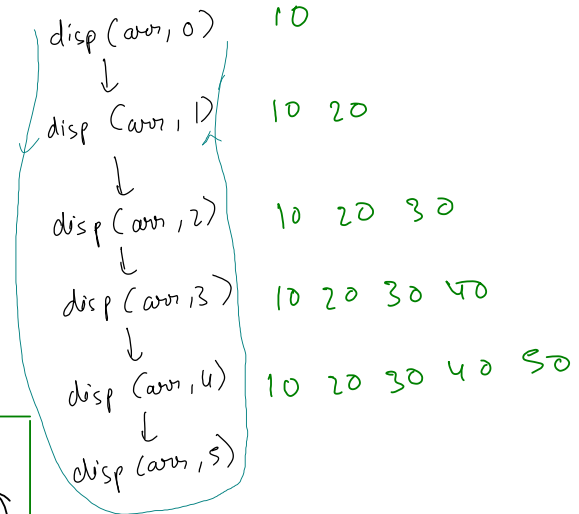

`displayArr (arr, idx+1);`

```

public static void displayArr(int[] arr, int idx){
    if(idx == arr.length) return;
    1 System.out.println(arr[idx]);
    2 displayArr(arr, idx+1);
}
    
```

0 1 2 3 4  
10 20 30 40 50

10, 20, 30, 40, 50	<div>4k arr</div>	<div>4 idx</div>	1, 2 ▷
10, 20, 30, 40	<div>4k arr</div>	<div>3 idx</div>	1, 2 ▷
10, 20, 30	<div>4k arr</div>	<div>2 idx</div>	1, 2 ▷
10, 20	<div>4k arr</div>	<div>1 idx</div>	1, 2 ▷
10	<div>4k arr</div>	<div>0 idx</div>	1, 2 ▷

Ques) Display Array in Reverse

{ 3, 1, 0, 7, 5 }

```
Sample Input
5
3
1
0
7
5

Sample Output
5
7
0
1
3
```

Expectation:

displayArrReverse(arr, 0);

5

7

0

3

1

With:

displayArrReverse(arr, 1)

5

7

0

3

Meeting Expectation from futh

displayArrReverse(arr, idx+1);

Syso (n);

```
public static void displayArrReverse(int[] arr, int idx) {
    if(idx == arr.length){
        return;
    }
    displayArrReverse(arr, idx+1);
    System.out.println(arr[idx]);
}
```

<del>arr, 5</del>
<del>arr, 4</del>
<del>arr, 3</del>
<del>arr, 2</del>
<del>arr, 1</del>
<del>arr, 0</del>

{ 1, 2, 3, 4, 5 }

1 > 2 5

1 > 2 5 4

1 > 2 5 4 3

1 > 2 5 4 3 2

1 > 2 5 4 3 2 1

## Ques) Maximum in An Array

{ 20, -30, 50, 10, 0, 60, 40 }

① Expectation:

int maxOfArray(int[] arr, int idx)  
 maxOfArray(arr, 0) → 60

② faith:

maxOfArray(arr, idx+1)  
 maxOfArray(arr, 1) → 60

③ Meet Expectation with faith:

compare our max with max that  
 we get from the remaining array.  
 return max(arr[idx], max(all))

```
public static int maxOfArray(int[] arr, int idx){
    0 if(idx == arr.length) return Integer.MIN_VALUE;
    1 int maxOfRemArray = maxOfArray(arr, idx + 1);
    2 int totalMax = Math.max(arr[idx], maxOfRemArray);
    } return totalMax;
```

0	1	2	3	4
9	8	6	3	4

42

Heap

<del>42</del> arr	<del>5</del> idx
<del>42</del> arr	<del>4</del> idx
<del>42</del> arr	<del>3</del> idx
<del>42</del> arr	<del>2</del> idx
<del>42</del> arr	<del>1</del> idx
<del>42</del> arr	<del>0</del> idx

0

1, > 2 max(4, ∞) = 4

1, > 2 max(4, 3) = 4

1, > 2 max(4, 6) = 6

1, > 2 max(6, 8) = 8

1, > 2 max(8, 9) = 9

return 9

## First Index & Last Index

target = 10

$\{ 20, 60, 10, 80, 50, 10, 20, 10 \}$

first Index

① Expectation:  $fi(arr, 10) \rightarrow 2$

② faith:  $fi(arr, 17) \rightarrow 2$

$\{ 20, 60, 10, 80, 50, 10, 20, 10 \}$   
 $\{ 60, 10, 80, 50, 10, 20, 10 \}$

③ Meet Expectation with faith  
if ( $arr[idx] == target$ ) return  $idx$   
else return  $fi(arr, idx + 1);$

```
public static int firstIndex(int[] arr, int idx, int x){  
    if(idx == arr.length) return -1;  
    if(arr[idx] == x) {  
        return idx;  
    }  
    return firstIndex(arr, idx + 1, x);  
}
```

Last Index

① Expectation:  $li(arr, arr.length - 1)$

② faith:  $li(arr, idx - 1)$

③ Meet Expect with faith:

if ( $arr[idx] == target$ )  
 return  $idx$ ;  
else  
 return  $li(arr, idx - 1);$

```
public static int lastIndex(int[] arr, int idx, int x){  
    if(idx == -1) return idx;  
    if(arr[idx] == x) return idx;  
    return lastIndex(arr, idx - 1, x);  
}
```

## Ques) All Indices of Array

target = 10

Expectation: allIndices(arr, target, idx, count.)  
                  ↓       ↓       ↓  
                  10     0     0  
                  { 2, 5, 6, 8 }

faith: allIndices(arr, target, idx+1, count.)

from idx+1 to arr.length

allIndices(arr, target, idx+1, count+1)

from idx+1 to arr.length + our own index element

Merging Expectation with faith:

```
public static int[] allIndices(int[] arr, int target, int idx, int count) {  
    // write ur code here  
  
    if(idx == arr.length) {  
        int[] base = new int[count];  
        return base;  
    }  
  
    if(arr[idx] == target) {  
        int[] res = allIndices(arr, target, idx + 1, count + 1);  
        res[count] = idx;  
        return res;  
    }  
  
    int[] res = allIndices(arr, target, idx + 1, count);  
    return res;  
}
```

# All Indices Dry Run

0 1 2 3 4 5  
 $\{10, 20, 30, 10, 20, 10\}$   
 target = 10

```
public static int[] allIndices(int[] arr, int target, int idx, int count) {
    // write ur code here

    if(idx == arr.length) {
        int[] base = new int[count];
        return base;
    }

    if(arr[idx] == target) {
        int[] res = allIndices(arr, target, idx + 1, count + 1);
        res[count] = idx;
        return res;
    }

    int[] res = allIndices(arr, target, idx + 1, count);
    return res;
}
```

<del>arr, 10, 6, 3</del>
<del>arr, 10, 5, 2</del>
<del>arr, 10, 4, 2</del>
<del>arr, 10, 3, 1</del>
<del>arr, 10, 2, 1</del>
<del>arr, 10, 1, 1</del>
<del>arr, 10, 0, 0</del>

$\{0, 0, 0\}$   
 1, 2  
 $\{0, 0, 5\}$   
 $\{0, 0, 5\}$   
 $\{0, 3, 5\}$   
 $\{0, 3, 5\}$
