

Subarrays Problem

Example
Sample Input
10 20 30
10
10 20
10 20 30
20
20 30
30

Sample Output
10
10 20
10 20 30
20
20 30
30

10 20 30

```
for(int i=0;i<n;i++) {
    for(int j=i;j<n;j++) {
        for(int k=j;k<n;k++) {
            System.out.println(arr[i] + " " + arr[j] + " " + arr[k]);
        }
    }
}
```

Total No. of Subarrays $\leq \frac{n(n+1)}{2}$

\Rightarrow Starting index
 \Rightarrow ending index
 \Rightarrow point

Starting index = 0 (i)

ei 0 10
ei 1 10 20
ei 2 10 20 30
ei 4 10 20 30 40

Starting index = 2

ei 0 2 30
ei 3 30 40

Starting index = 1 (i)

ei 1 20
ei 2 20 30
ei 3 20 30 40

Starting index = 3

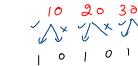

ei 3 40

```
for(int i=0;i<n;i++) {
    for(int j=i;j<n;j++) {
        for(int k=j;k<n;k++) {
            System.out.println(arr[i] + " " + arr[j] + " " + arr[k]);
        }
    }
}
```

Subsets of an Array

Example
Sample Input
10 20 30
10
10 20
10 20 30
20
20 30
30

0 1 2
10 20 30 $\rightarrow 2^n$ subsets

1 0 1 0 1 0

* Used Reverse Engineering
Analysed Subsets \rightarrow Binary \rightarrow Decimal
but solved decimal \rightarrow Binary \rightarrow Subsets

$2^3 = 8$ binary nos & analogy with the problem

```
for(int dec=0;dec<(int)(Math.pow(2,n));dec++) {
    int bin = convertToBinary(dec);
    int power = (int)(Math.pow(2,(n-1)));
    for(int i=0;i<n;i++) {
        int bit = ((bin/power)%2);
        if(bit==1)
            System.out.print(arr[i] + " ");
        else
            System.out.print(" ");
        power = power/2;
    }
    System.out.println();
}
```

↳ Loop from 0 to $2^n - 1$ to generate decimal nos
↳ convert these decimal to binary
↳ convert binary to subsets

Extracting bits from binary No

$$(011010 / 10^5) = 0 \cdot 1 \cdot 0 = 0$$

$$(011010 / 10^4) = 0 \cdot 1 \cdot 0 \cdot 1 = 1$$

$$(011010 / 10^3) = 0 \cdot 1 \cdot 1 \cdot 0 = 1$$

$((\text{binary} / \text{power}) \% 10) \rightarrow$ gives the MSB

power starts from 10^{n-1} !

Some Effect due to Dipole

Effect due to dipole

Diagram

\rightarrow Shape will change as we turn dipole as we are rotating from 0°

If we stand from somewhere in the middle, it is possible that there will not be any rotation.

Condition for dip: when we can just give a dipole S along the field B if $\theta = 0^\circ$ or $\pi/2$ when $\theta = \pi/2$ then S is perpendicular to B .

Effect of dipole: $\Delta g = (\theta + \pi/2)^{-1}$

Diagram

↳ State A: WackoLand-1 (with 'teaser')

Column wise alternate
Up & down pairing.

↳ Since we have to fit
Cells under stepgates

↳ Q: OPT?

```

    public class Solution {
        public int[] findOrder(int n, int[][] edges) {
            List<List<Integer>> adjList = new ArrayList<List<Integer>>();
            for (int i = 0; i < n; i++) {
                adjList.add(new ArrayList<Integer>());
            }
            for (int i = 0; i < edges.length; i++) {
                adjList.get(edges[i][0]).add(edges[i][1]);
            }
            int[] indegree = new int[n];
            for (int i = 0; i < n; i++) {
                for (int j : adjList.get(i)) {
                    indegree[j]++;
                }
            }
            Queue<Integer> queue = new LinkedList<Integer>();
            for (int i = 0; i < n; i++) {
                if (indegree[i] == 0) {
                    queue.add(i);
                }
            }
            List<Integer> result = new ArrayList<Integer>();
            while (!queue.isEmpty()) {
                Integer currNode = queue.poll();
                result.add(currNode);
                for (int i : adjList.get(currNode)) {
                    if (indegree[i] == 1) {
                        queue.add(i);
                    } else {
                        indegree[i]--;
                    }
                }
            }
            if (result.size() != n) {
                return new int[0];
            }
            return result.stream().mapToInt(Integer::intValue).toArray();
        }
    }

```
